

## GREEN BUILDING PRODUCTS

## Capitol Recycling Services

These Products Can Help Your Customers and Owners with LEED and Green Building Credit

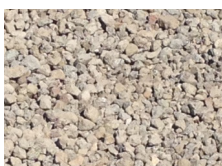

### NEW PRODUCT!

#### 100% Concrete 3/4" Recycled Baserock

We are pleased to announce our new Baserock Product as part of the Recycled Aggregate family!

For those projects requiring a non-blended recycled mix, we now offer a 100% Concrete 3/4" Baserock product.

This product is in limited supply and currently located at our San Jose Capitol yard. Please contact us for special large project orders!

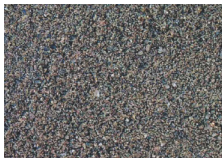

#### 3/4" Recycled Drain Rock

This eco-friendly recycled material is made from clean, crushed concrete. This product is ideally suited for use as drain rock pipe bedding in underground projects.

#### City of San Jose - Class I Bedding

This eco-friendly recycled material is made from clean, crushed concrete. This product meets the City of San Jose specifications for Class I Bedding.

#### Recycled Sand

This eco-friendly recycled sand is made from clean, crushed concrete. This sand is 100% recycled and is available at the Capitol location.

M-F: 7:00 am – 3:30 pm

### What are LEED® Credits?

Leadership in Energy and Environmental Design (LEED) is a rating system developed by the United States Green Building Council (USGBC) to evaluate the environmental performance of a building. The LEED rating system has five main credit categories: sustainable site development, water savings, energy efficiency, materials selection (used here), and indoor environmental quality. Each category is divided into credits, which are used to score and rank construction projects utilizing the LEED system.

These recycled materials can qualify as regional materials, both locally-harvested and as 100% post-consumer recycled content.
